

LED lights

The LED lights emit a white spectrum close to natural light, optimized for plant growth with the ideal wavelengths. The standard types of LED tubes come in lengths of 600, 900, 1200, and 1800mm, adjustable in 50mm increments to accommodate the size of the device. Additionally, color changes are also possible.

Vege Tree Farm 8-unit module

Ex. Vege Tree 8-unit module can cultivate approximately 640 turnips (80 turnips x 8 units), producing 32 turnips per day.

Cultivation shelves for seedlings can be optionally installed.

Due to its height being customizable, it can be suitable for cultivation labs or small-scale plant factories, and also alongside the walls.
